

## Java

```
class Solution {  
    public int[] getAverages(int[] nums, int k) {  
  
    }  
}
```

---

## JavaScript

```
/**  
 * @param {number[]} nums  
 * @param {number} k  
 * @return {number[]}  
 */  
var getAverages = function(nums, k) {  
  
};
```

---

## C++

```
class Solution {  
public:  
    vector<int> getAverages(vector<int>& nums, int k) {  
  
    }  
};
```

---

## C#

```
public class Solution {  
    public int[] GetAverages(int[] nums, int k) {  
  
    }  
}
```

---
